

SecureAuth IdP 8.2.x Mobile

SecureAuth IdP Mobile Integrations

SecureAuth IdP supports the BYOD and mobile trends with 2-Factor Authentication for iOS and Android native, mobile applications; and enables provisioning and certificate delivery and synchronization from appliances to individual mobile devices to alleviate user friction and burdening login procedures.

Configuration Guides

[Native Mobile App Integration Guide](#) – enable the integration of and the appropriate redirection to iOS, Android, and Windows RT native mobile applications, using 2-Factor Authentication and SSO

[Mobile App Store Configuration Guide](#) – create an app store for corporate iOS and Android mobile applications for quick and easy download access

[iOS Exchange Provision Configuration](#) – provision mobile devices to synchronize Microsoft Exchange credentials from desktops

[iOS Google Apps Provision Configuration Guide](#) – provision mobile devices to synchronize Google Apps credentials from desktops

[Juniper Pulse iOS Provisioning Integration Guide](#) – provision mobile devices to synchronize certificate information from Juniper Pulse
