

SecureAuth IdP Appliance Certificate Renewal Utility (ACRU)

Be sure that all of the **Prerequisites** have been met before installing and running the **ACRU**

For any questions regarding the **Prerequisites** as they pertain to the existing environment, please contact **SecureAuth Support**

Introduction

Use this guide to install, run (update), and confirm the actions of the SecureAuth IdP Appliance Certificate Renewal Utility (ACRU).

The **ACRU** tool is for use on SecureAuth IdP pre-8.1 appliances to update the Operating System (OS) to support SecureAuth's new [SHA-2 Cloud Services' infrastructure](#). ACRU updates all of the certificate information to reflect the SHA-2 hashing algorithm and updates the URLs used by the appliance to communicate with the SecureAuth cloud services.

Prerequisites

1. If SecureAuth IdP is integrated with any VPN or Gateway (Juniper, Cisco, Citrix, F5) using a vendor-specific thick client and a native X.509 personal certificate, then upload the [SHA-2 SecureAuth Public CA Certificates](#) to the VPN or Gateway, and all client workstations *before* running the ACRU

If no VPNs or Gateways are integrated with SecureAuth IdP, then the ACRU can be utilized immediately

- SecureAuth recommends that the CA certificates be deployed via an [Active Directory Group Policy](#) to ensure that most if not all client systems have the required CA certificates
- Also available is a **Certificates Installer**, which can be downloaded and executed on the end-user's Windows system, to install the certificates in the proper certificate stores
- Manual installation of the certificates can be accomplished by end-users downloading the individual **Root** and **Intermediate** certificate **CRT files** located on the [SecureAuth CA Public Certificates](#) page

2. If any Firewalls are in place, open the following ports to enable access the necessary IP Addresses and URLs:

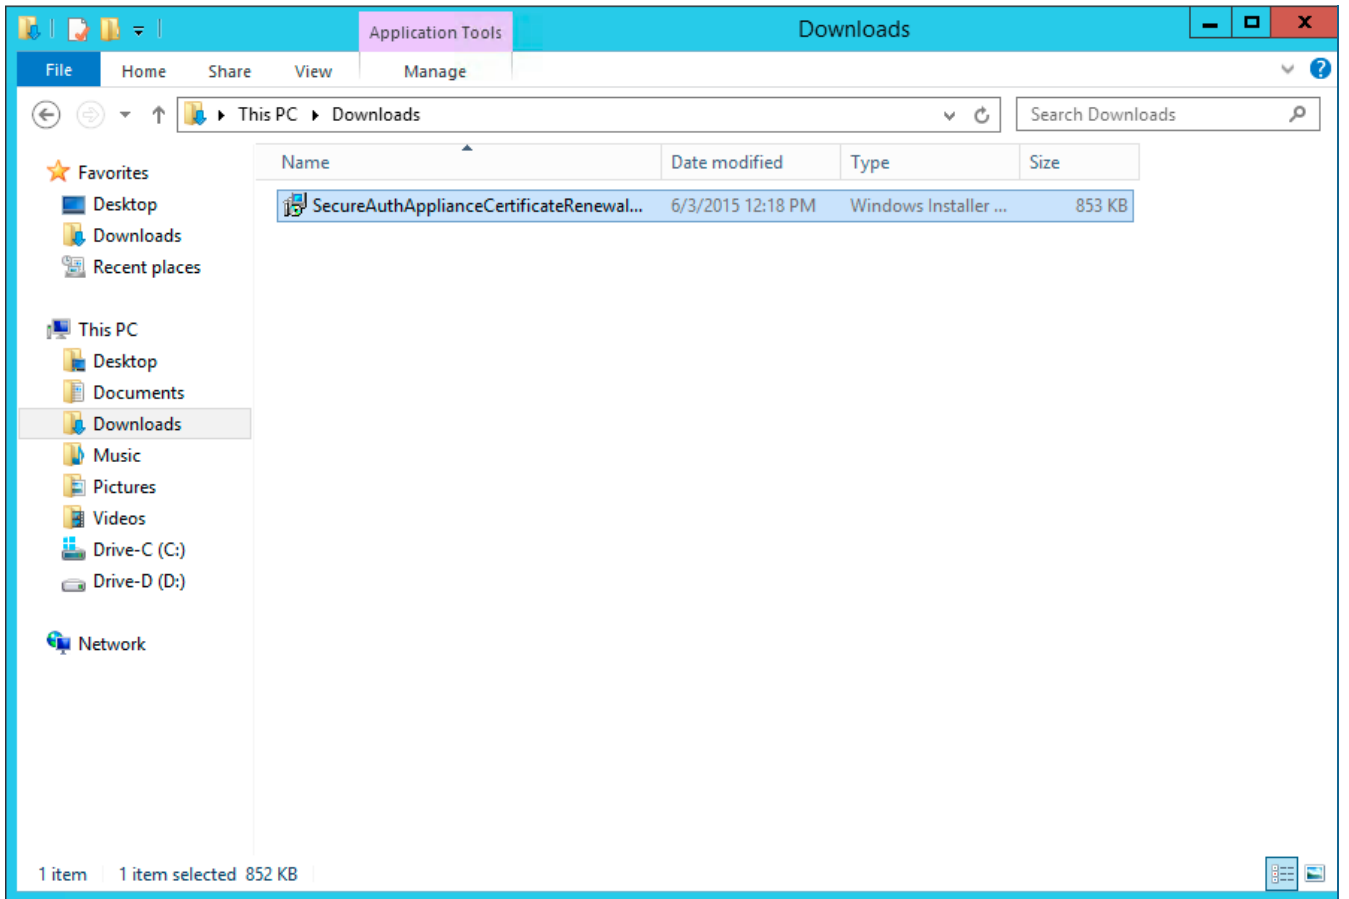

- **TCP 80 and 443 - IP:** 208.82.207.89; **URL:** cloud.secureauth.com / us-cloud.secureauth.com
- **TCP 80 and 443 - IP:** 208.74.31.114; **URL:** trx.secureauth.com / us-trx.secureauth.com
- **TCP 80 and 443 - IP:** 146.88.110.112; **URL:** cloud.secureauth.com / us-cloud.secureauth.com
- **TCP 80 and 443 - IP:** 146.88.110.114; **URL:** trx.secureauth.com / us-trx.secureauth.com
- **TCP 80 and 443 - IP:** 162.216.42.110; **URL:** cloud.secureauth.com / us-cloud.secureauth.com
- **TCP 80 and 443 - IP:** 162.216.42.111; **URL:** trx.secureauth.com / us-trx.secureauth.com
- **TCP 443 - See [SecureAuth Cloud Services IP Addresses](#); URL:** us-audit.secureauth.com
- **TCP 443 - See [SecureAuth Cloud Services IP Addresses](#); URL:** us-services.secureauth.com

3. **Download** the **SecureAuth IdP Appliance Certificate Renewal Utility**

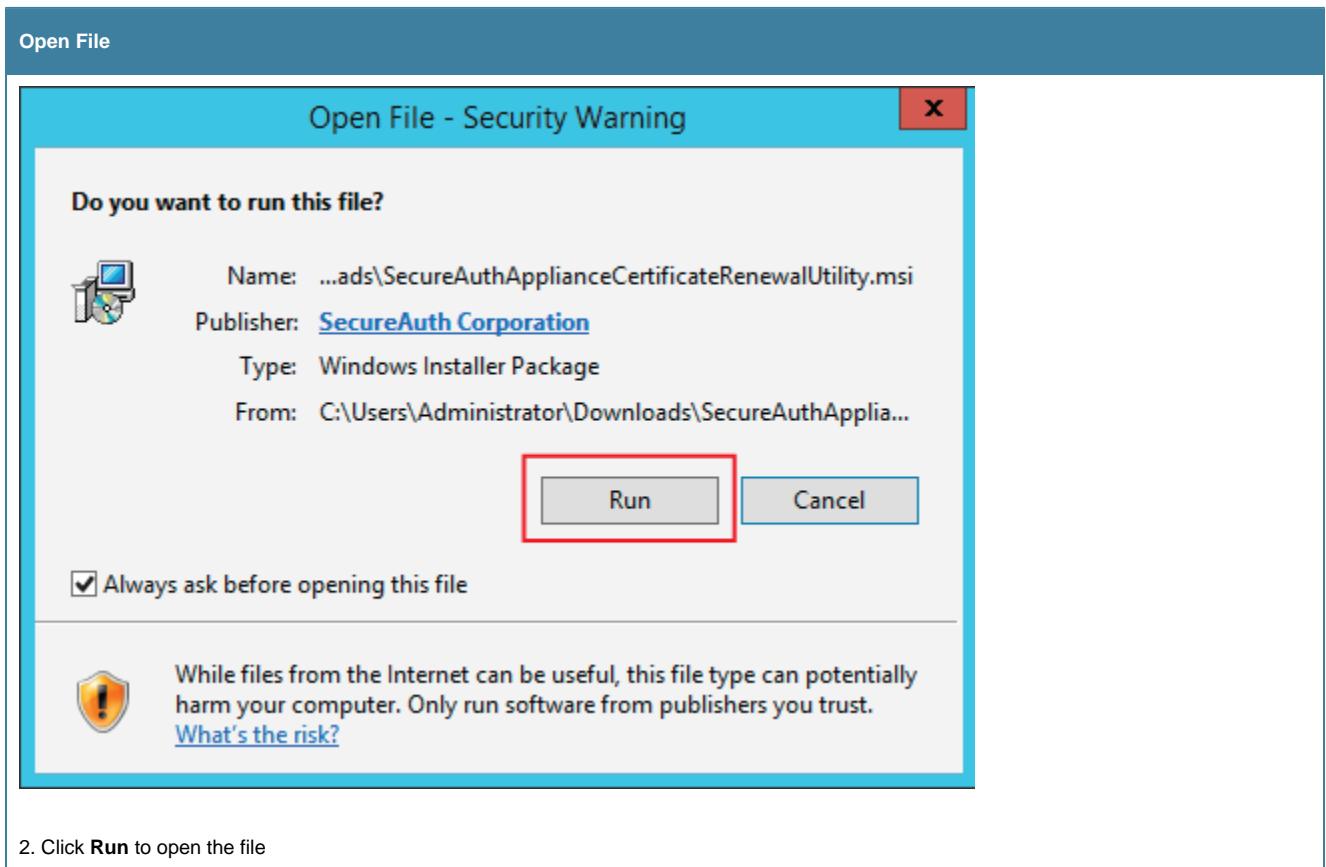

- **Filename:** SecureAuthApplianceCertificateRenewalUtility.msi
- **Filesize:** 856 KB (876,544 bytes)
- **MD5 hash:** c15520a622ae207e07be3f67a9ce4535

ACRU Steps

ACRU Installation

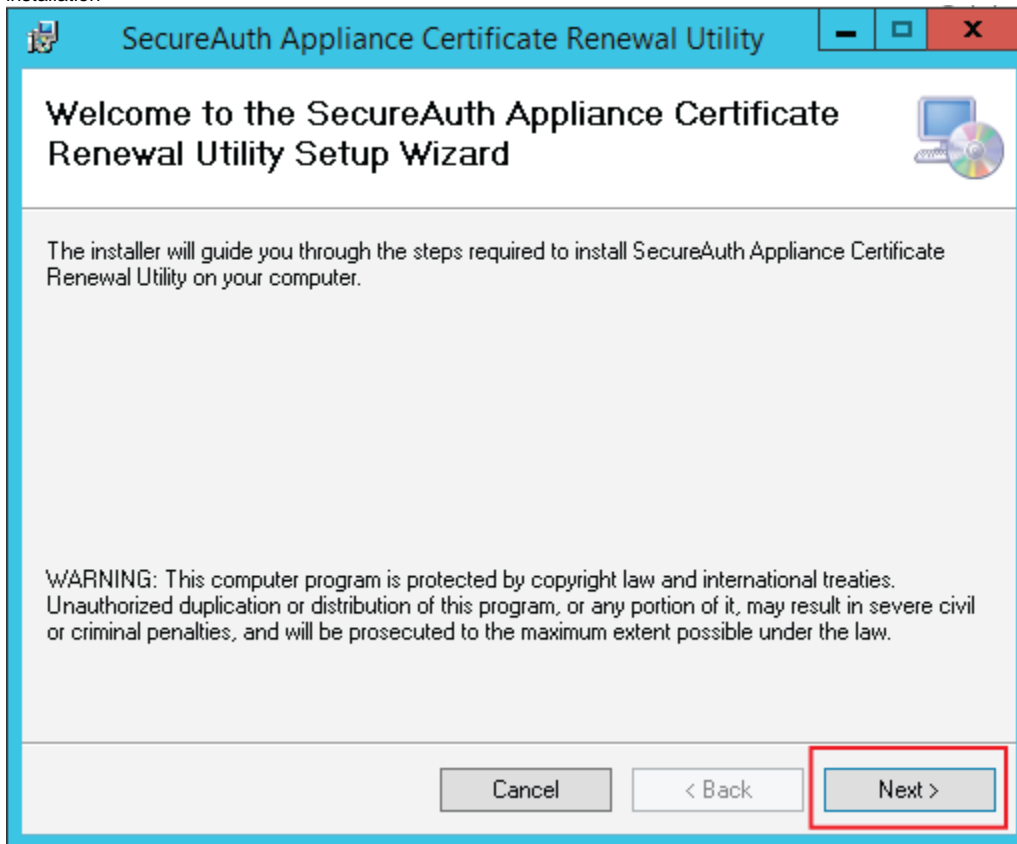

1. Locate and **open** (double-click) the downloaded ACRU file, **SecureAuthApplianceCertificateRenewalUtility.msi**

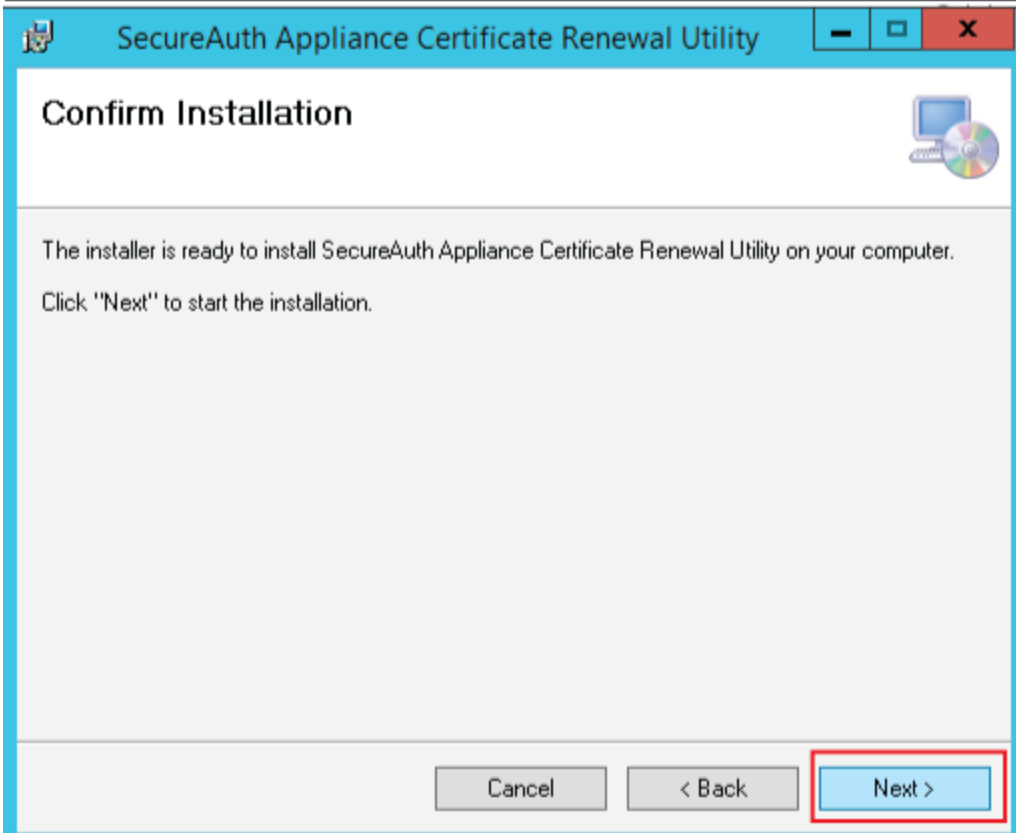

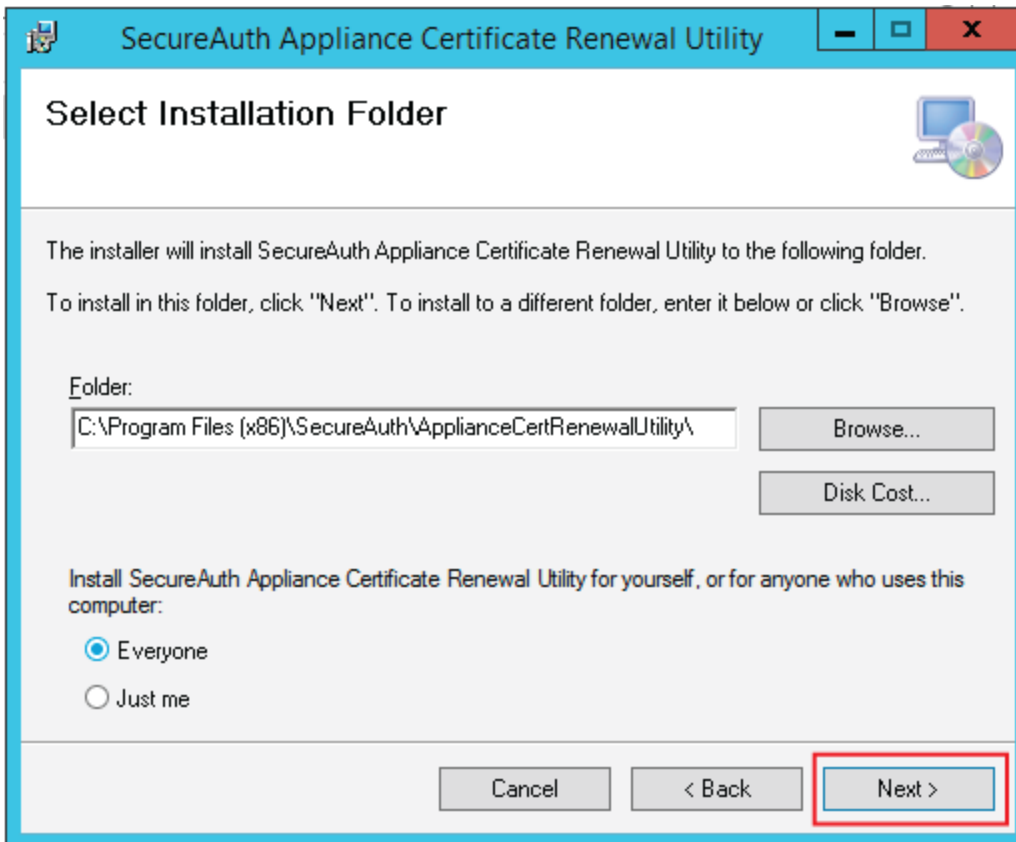

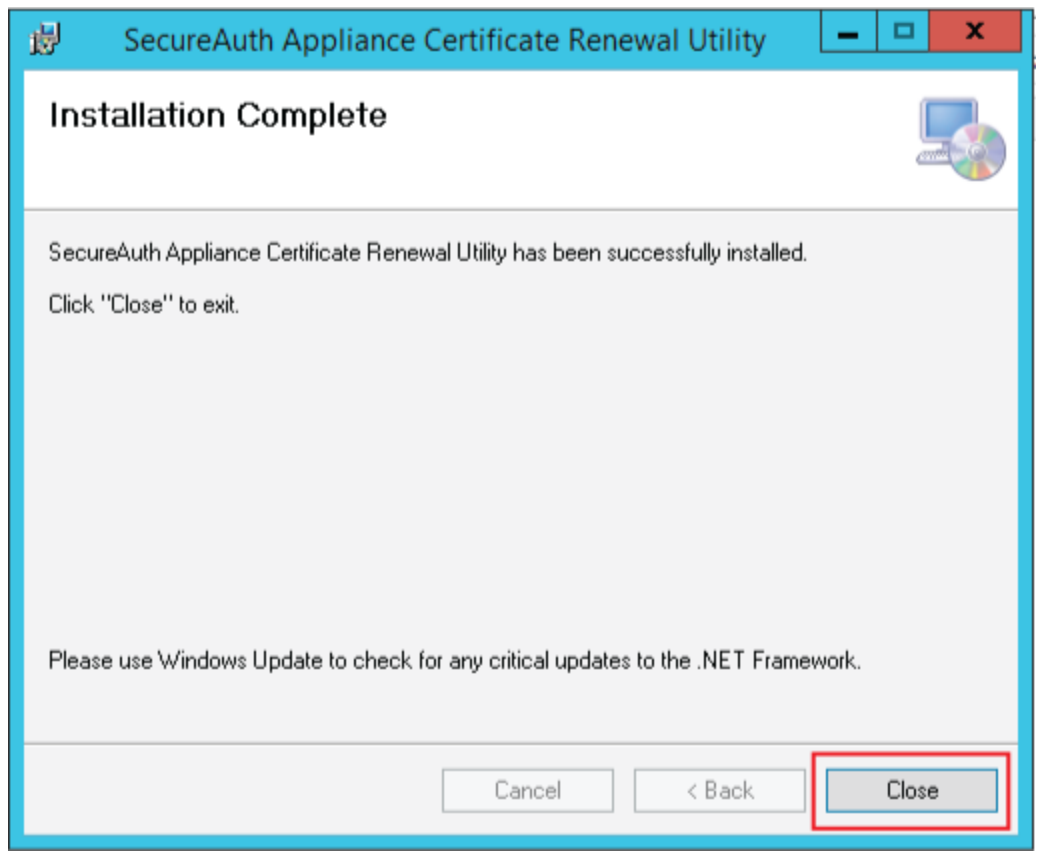

2. Click **Run** to open the file

ACRU Installation Wizard

3. Once the **ACRU Installation Wizard** opens, click **Next**
4. Leave the values as default, and click **Next**
5. Click **Next** to confirm the installation
6. Click **Close** to complete the installation

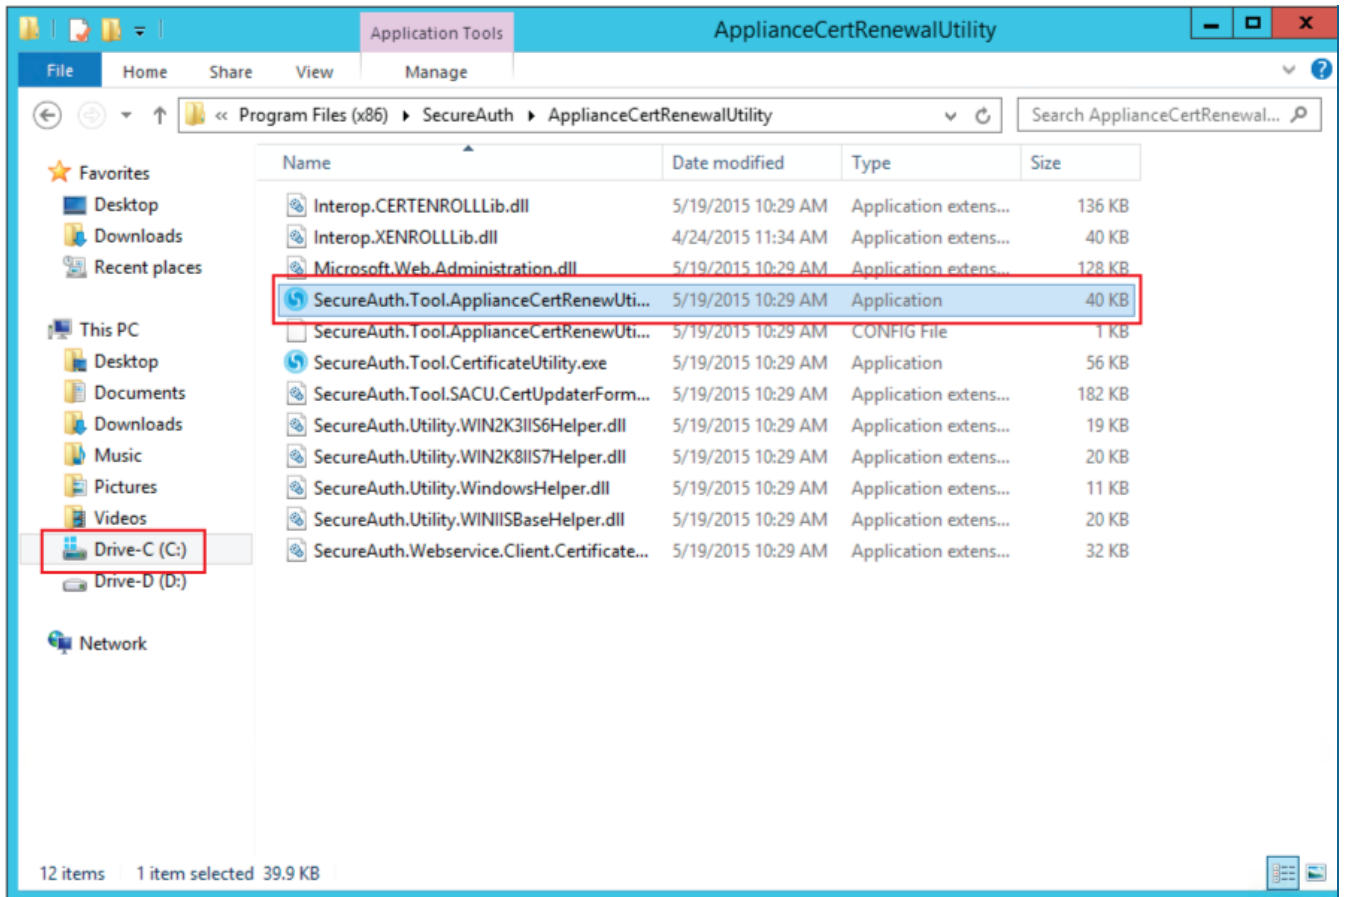

Run ACRU

7. Once the **ACRU Tool** is installed, locate it in **Drive-C -> Program Files (x86) -> SecureAuth -> ApplianceCertRenewalUtility**
8. Open (double-click) the **SecureAuth.Tool.ApplianceCertRenewUtility.exe** file

ACRU Update Wizard

SecureAuth Appliance Certificate Renewal Utility

Renew Certificate Options

Through submitting a Certificate Signing Request *

Through importing a PFX file

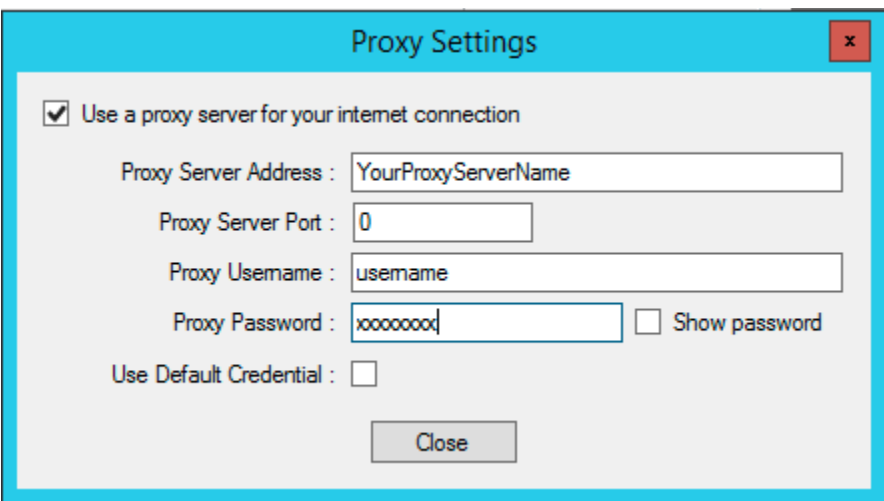

Password : Show Password

9. Once the **ACRU Update Wizard** opens, leave the configurations as default and click **Start**

Select **Through importing a PFX file** *only if* explicitly instructed to do so by SecureAuth

 If a proxy is configured on the SecureAuth IdP appliance, click **Proxy Settings** *first*

Proxy Settings

Use a proxy server for your internet connection

Proxy Server Address : YourProxyServerName

Proxy Server Port : 0

Proxy Username : username

Proxy Password : xxxxxxxx Show password

Use Default Credential :

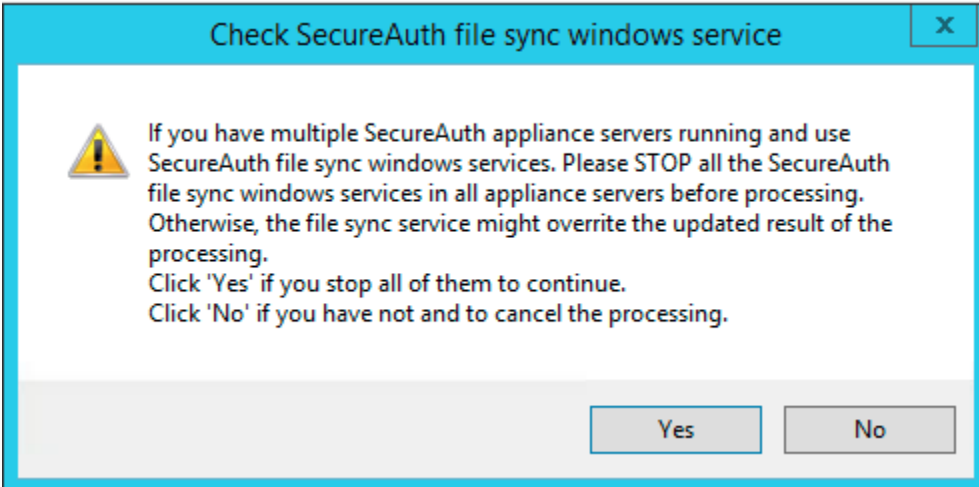

Close

1. Check **Use a proxy server for your internet connection**

2. Provide the **Proxy Server Address**, **Proxy Server Port**, **Proxy Username**, and **Proxy Password**

3. Click **Close**

 A **Check SecureAuth file sync windows service** prompt may appear; if so, ensure that all file sync windows services are stopped and click **Yes**

Check SecureAuth file sync windows service

 If you have multiple SecureAuth appliance servers running and use SecureAuth file sync windows services. Please **STOP** all the SecureAuth file sync windows services in all appliance servers before processing. Otherwise, the file sync service might overwrite the updated result of the processing.
Click 'Yes' if you stop all of them to continue.
Click 'No' if you have not and to cancel the processing.

Yes No

The value of the AppSetting 'IPEvaluationWSMsgSecurityUrl' is updated to:
http://cloud.secureauth.com/ipservice/ipevaluation_svc/msg
Done updating web service URLs.

==== Updating the realm 'SecureAuth2' =====

10. Wait for the **ACRU Tool** to update

 A **Reset IIS** prompt may appear; if so, click **Yes** to reset IIS

11. Once the **ACRU** updates are complete, click **Close**

SECUREAUTH

This page will automatically redirect to the **Admin Console** or press **Continue** to proceed now.

- Continue
- Setup Wizard *beta*
- OAuth 2.0 Manager
- Update WebConfig**
- Decrypt WebConfig

12. Start Internet Explorer and click the **SecureAuth Admin** bookmark

13. On the initial screen, click **Update WebConfig**

Update WebConfig

SECUREAUTH

Back Continue

Update

Update web config files for every realm.

Update Resource

Force update of resource dll files.

Remove IP Block

Remove any IP block configurations.

Results:

```
Starting Update...
Updating D:\SecureAuth\Template\web.config...
Updating D:\SecureAuth\SecureAuth999\web.config...
Updating D:\SecureAuth\SecureAuth998\web.config...
Updating D:\SecureAuth\SecureAuth9\web.config...
Updating D:\SecureAuth\SecureAuth8\web.config...
Updating D:\SecureAuth\SecureAuth7\web.config...
Updating D:\SecureAuth\SecureAuth6\web.config...
Updating D:\SecureAuth\SecureAuth5\web.config...
Updating D:\SecureAuth\SecureAuth4\web.config...
Updating D:\SecureAuth\SecureAuth3\web.config...
Updating D:\SecureAuth\SecureAuth2\web.config...
Updating D:\SecureAuth\SecureAuth1\web.config...
Updating D:\SecureAuth\SecureAuth0\web.config...
Update Complete
```

14. Click **Update** and see the **Results** listed and **Update Complete** when it is finished

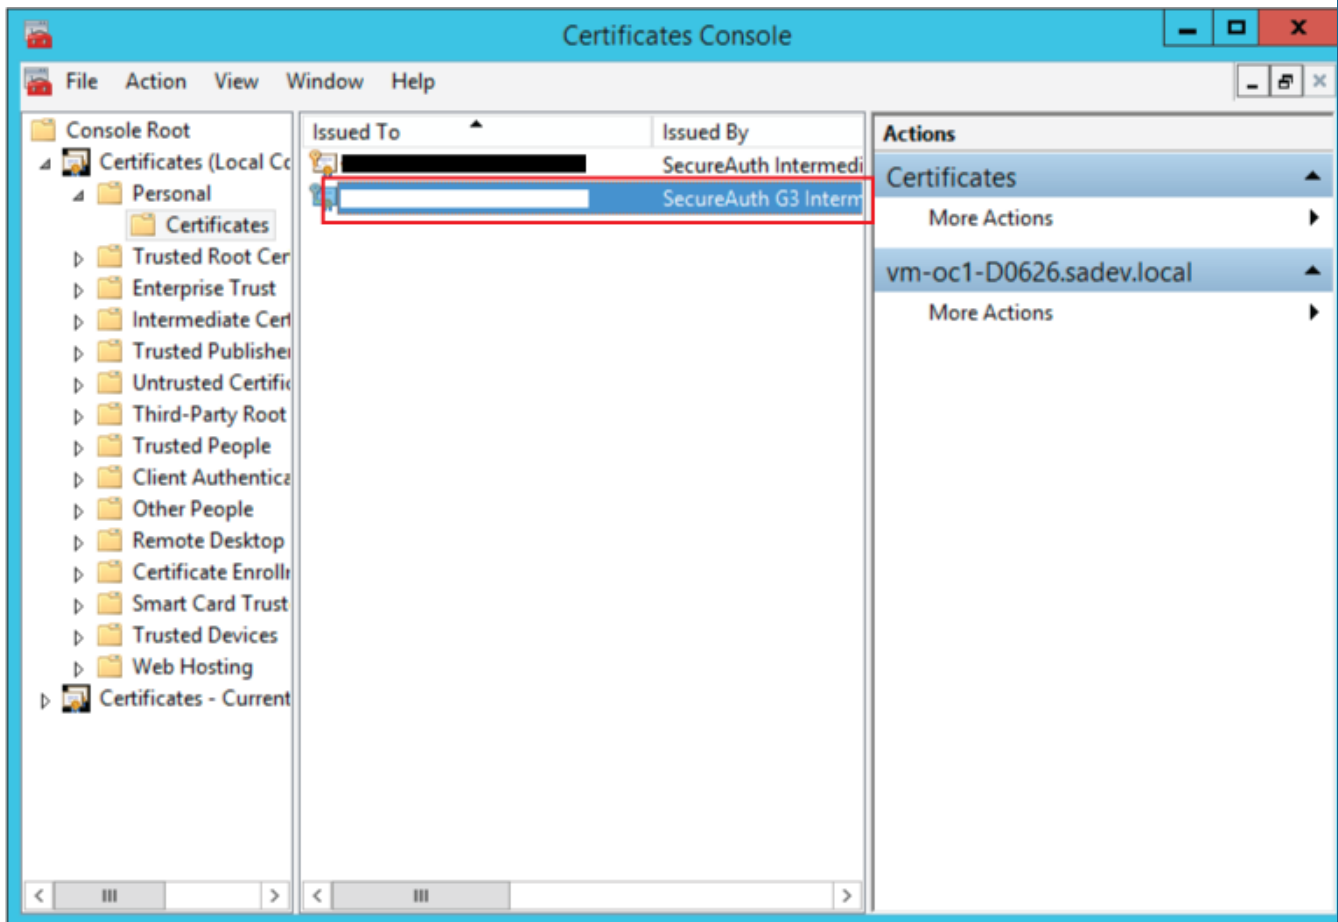

For SecureAuth IdP versions 8.0.0 and earlier, the **Transaction (Trx) Log URL** must be modified to avoid license errors

See [below](#) for more information

Confirm Changes

Once the installation and update has been completed, confirm that the changes have been applied to the appliance's OS

Certificates Console

In the **Certificates Console**, open (double-click) the **SecureAuth G3** certificate

Old SHA-1 certificates may still be present in the **Certificates Console**, so be sure to select the correct one

▼ WSE 3.0 / WCF Configuration

Certificate Use WSE 3.0:	<input type="text" value="True"/>
Certificate URL:	<input type="text" value="http://cloud.secureauth.com/certservice/cert.svc/msg"/>
Telephony Use WSE 3.0:	<input type="text" value="True"/>
Telephony URL:	<input type="text" value="http://cloud.secureauth.com/telephonyservice/telephony.svc/msg"/>
SMS Use WSE 3.0:	<input type="text" value="True"/>
SMS URL:	<input type="text" value="http://cloud.secureauth.com/smsservice/sms.svc/msg"/>
Push Use WSE 3.0:	<input type="text" value="True"/>
Push URL:	<input type="text" value="http://cloud.secureauth.com/pushservice/push.svc/msg"/>
Trx Use WSE 3.0:	<input type="text" value="True"/>
Trx Log Service URL:	<input type="text" value="http://cloud.secureauth.com/trxservice/trx.svc/msg"/>

In the SecureAuth IdP Web Admin, in the **System Info** tab, the URLs in the **WSE 3.0 / WCF Configuration** section are updated to properly communicate with the SecureAuth cloud services

For SecureAuth IdP versions 8.0.0 and earlier, in the **Admin Realm (SecureAuth0)**, set the **Trx Log Service URL** to **http://cloud.secureauth.com/trxservice/trx.svc/msg** if **True** is selected from the **Trx Use WSE 3.0** dropdown

Set the **Trx Log Service URL** to **https://cloud.secureauth.com/trxservice/trx.svc** if **False** is selected from the **Trx Use WSE 3.0** dropdown

 If a proxy is already configured on the appliance, the **WSE 3.0** dropdowns and **URLs** are updated accordingly

▼ WSE 3.0 / WCF Configuration

Certificate Use WSE 3.0: 

Certificate URL:

Telephony Use WSE 3.0: 

Telephony URL:

SMS Use WSE 3.0: 

SMS URL:

Push Use WSE 3.0: 

Push URL:

Trx Use WSE 3.0: 

Trx Log Service URL:

Refer to [Web Proxy Server Configuration Guide](#) for more information

SecureAuth recommends to select **False** from the **Trx Use WSE 3.0** dropdown, and set the **Trx Log Service URL** to **https://cloud.secureauth.com/trxservice/trx.svc** to utilize HTTPS encryption rather than Message Level Encryption (msg)

▼ WSE 3.0 / WCF Configuration

Certificate Use WSE 3.0:	True	▼
Certificate URL:	http://cloud.secureauth.com/certservice/cert.svc/msg	
Telephony Use WSE 3.0:	True	▼
Telephony URL:	http://cloud.secureauth.com/telephonyservice/telephony.svc/msg	
SMS Use WSE 3.0:	True	▼
